

“A Hose Designed with Crimping in Mind”

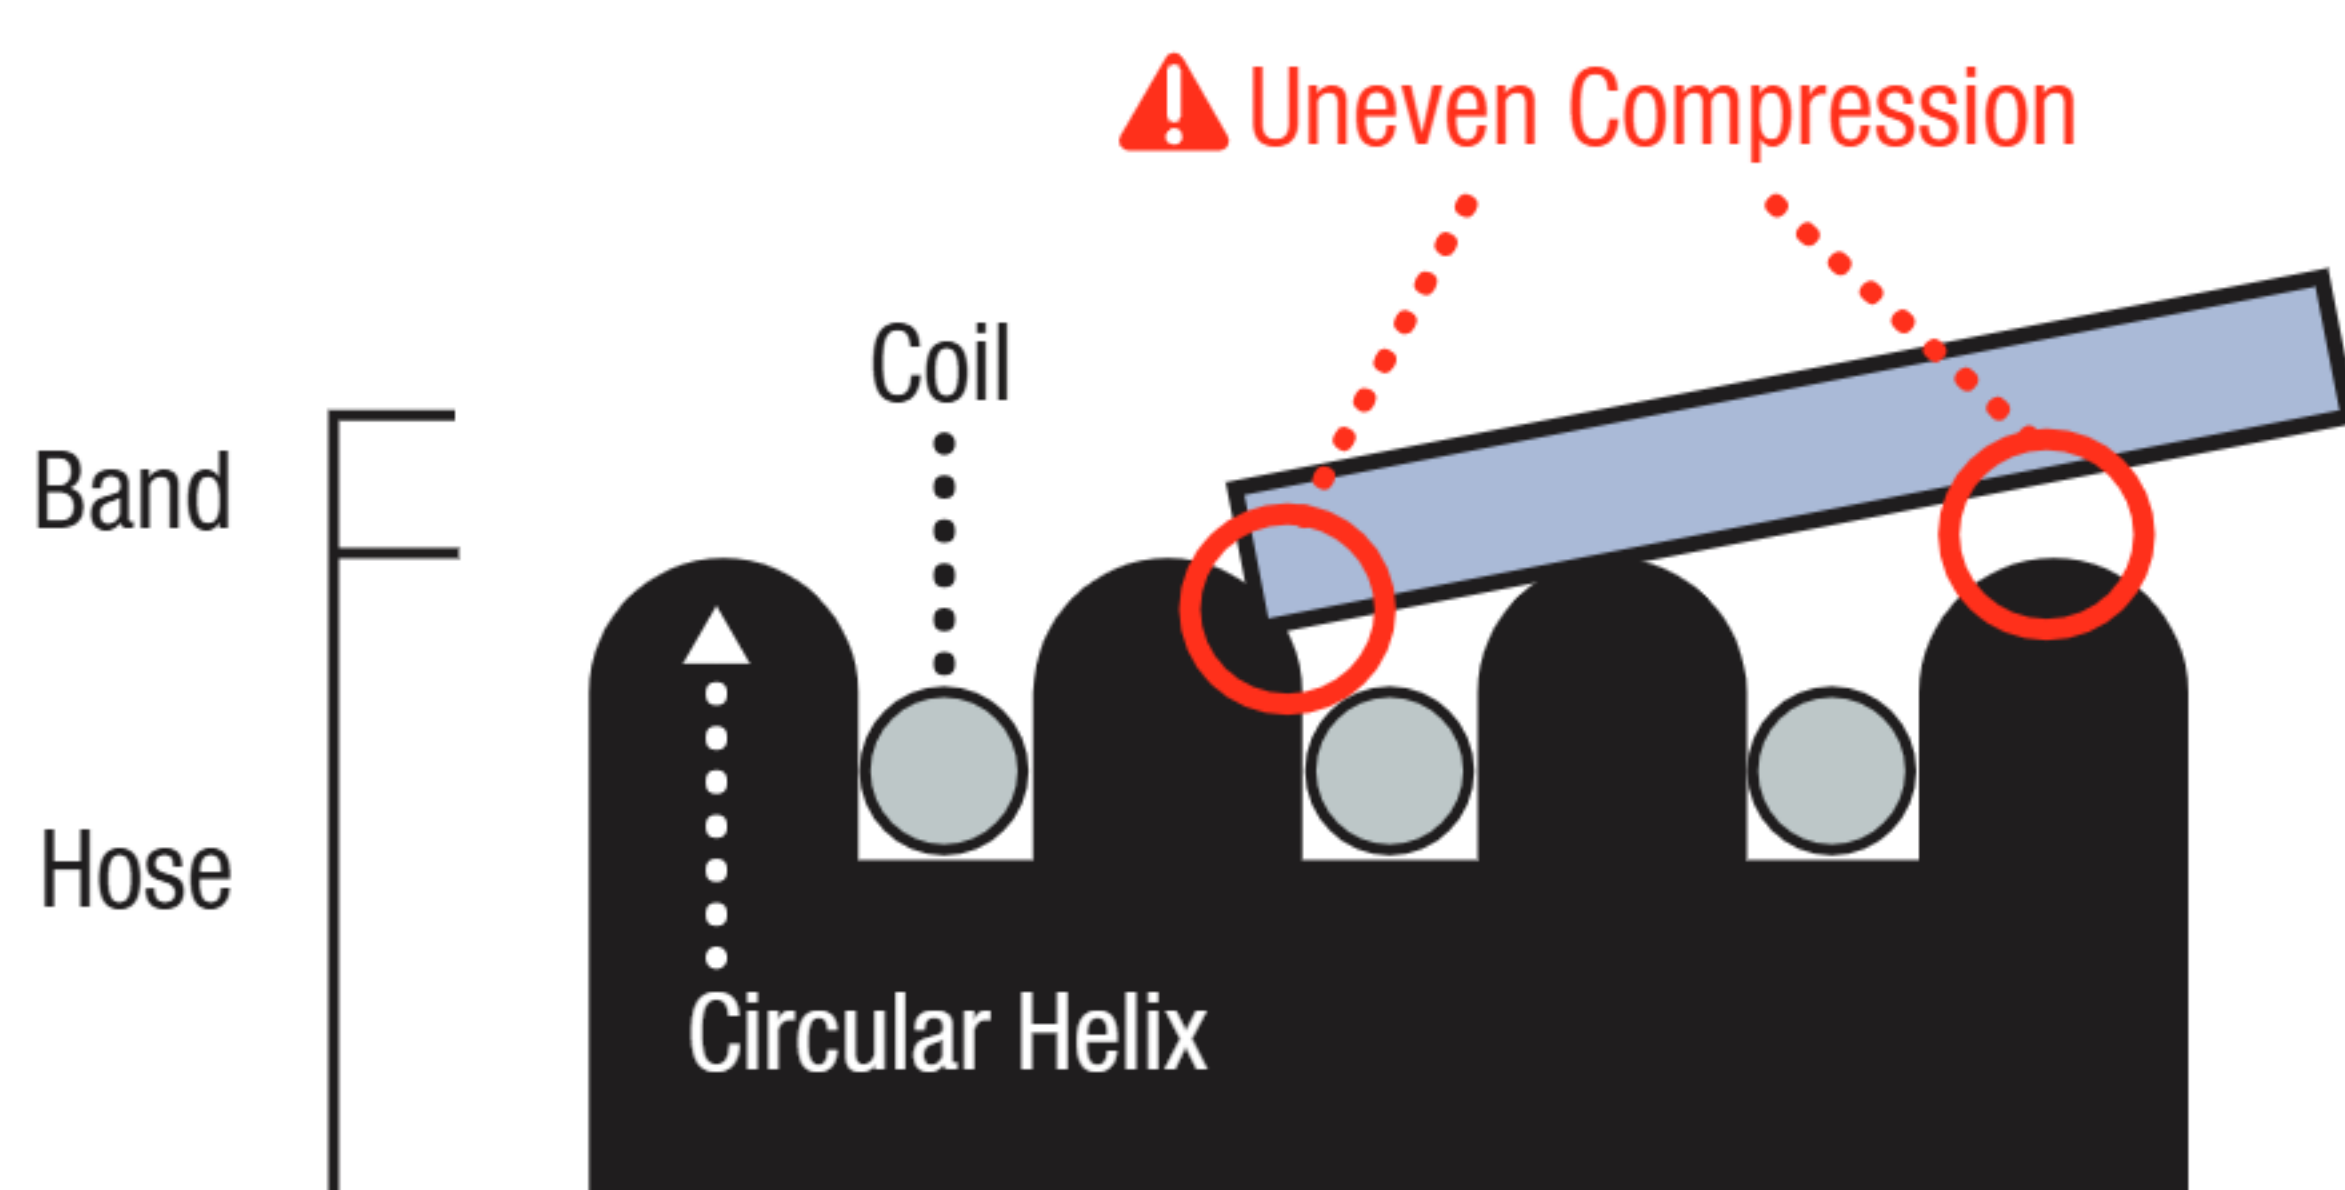

**Original TDH™ Series
Round Helix**

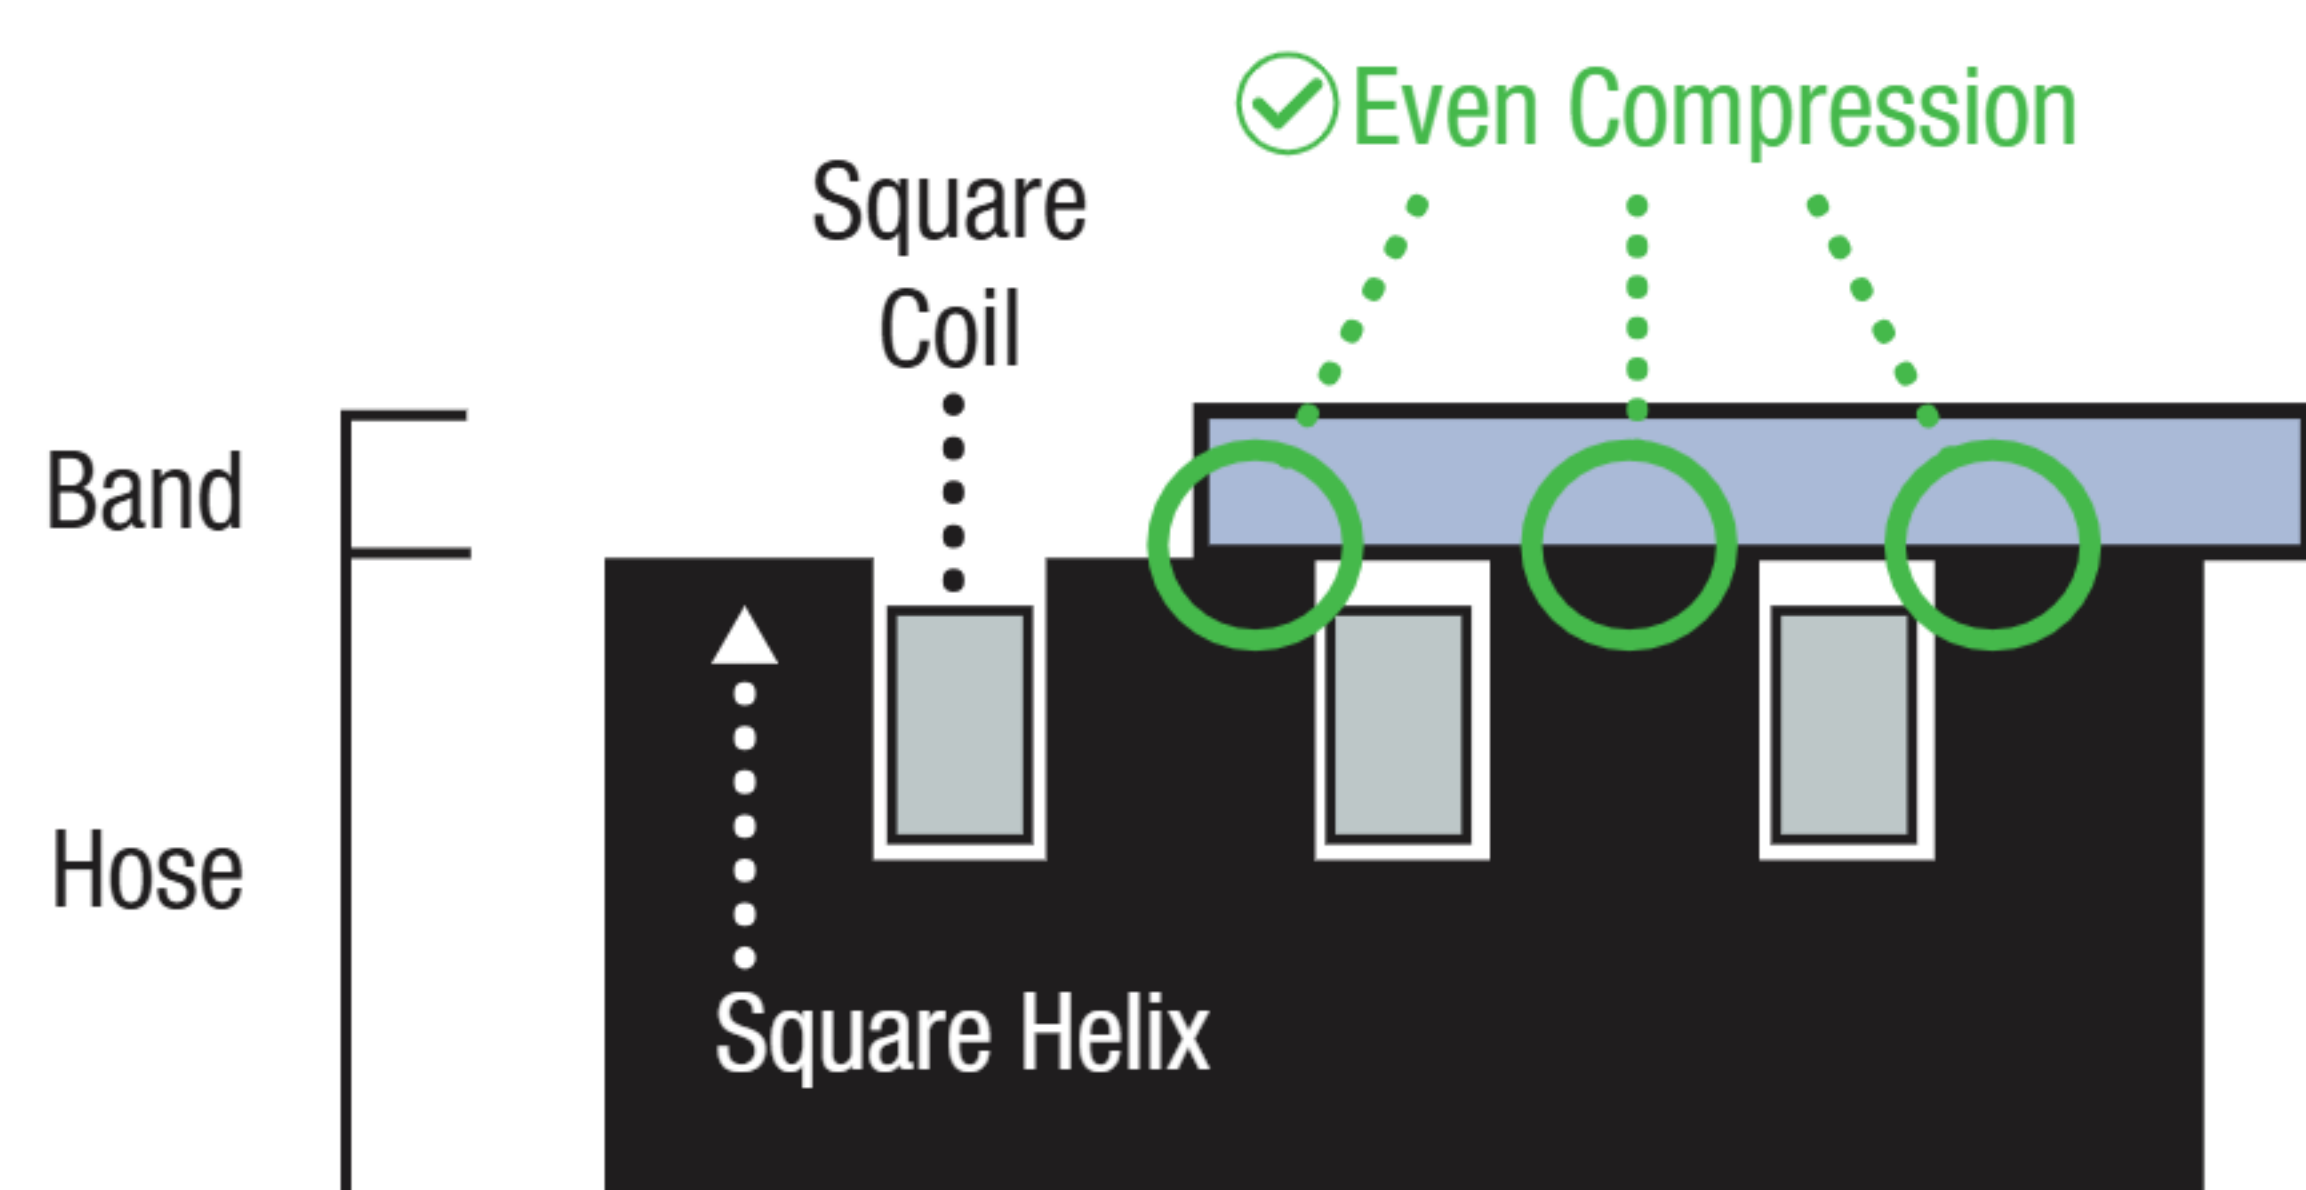

**New SQ-TDH™ Series
Square Helix**

The SQ-TDH™ Square Helix design with the associated SQ-BCCF™ square banding coil improves band clamp retention compared to traditional designs.

***Rounded Design =
Less Compression***

***Square Design =
Greater Compression***

Traditional round helix profiles can allow band clamps to settle between the helices, creating uneven sealing pressure.

The SQ-TDH™ Series square-profile external helix geometry increases contact area between the outer surface and the clamp, promoting more uniform load distribution and reduces the tendency for dents to settle between the helices.

NOTE: TDH™ - all sizes still available
